

# Otori

[Back to xenos](#)

We also had our Rocket Raccoon inspired race, the Otori. The player also wanted to focus on being able to fit through things. They're ironically rare in Procyon sector (ironic since raccoons are in the genus procyon XD):

Here are some things you might expect an Otori to do:

0 Stress: Fit into small spaces such as vents. Climb easily using your claws.

1 Stress: Eat something typically nonedible. Track a creature by scent.

2 Stress: Fit into impossibly small spaces such as between the cracks of a door.
